

OUR VISION: Well connected, resilient and thriving communities, landscapes and natural systems across 3,600km of eastern Australia.

OUR PURPOSE

To bring people together to connect, protect and regenerate nature, providing solutions at the scale needed to meet our climate, biodiversity and wellbeing challenges.

OUR WORK PILLARS

Catalysing, connecting and enabling

Achieving connectivity at scale

Growing a flourishing and effective organisation

OUR STRATEGIES

TRANSLATE SCIENCE INTO ACTION:

Designing and supporting science based projects that address what nature and communities need at the local level, while combining to create impact at the whole-of-landscape scale.

WEAVE TRADITIONAL KNOWLEDGE WITH WESTERN SCIENCE:

To collaborate with First Nations groups to improve impact on the ground by weaving traditional knowledge with western science the right way.

EMPOWER:

Sharing science, knowledge, tools and lessons learnt to build the capacity, capability and resilience of our partners and the local communities they engage.

STRATEGIC PLANNING AND PRIORITISING:

Use best practice science to identify and prioritise key gaps in connectivity and partnerships and secure the resources needed to fill them.

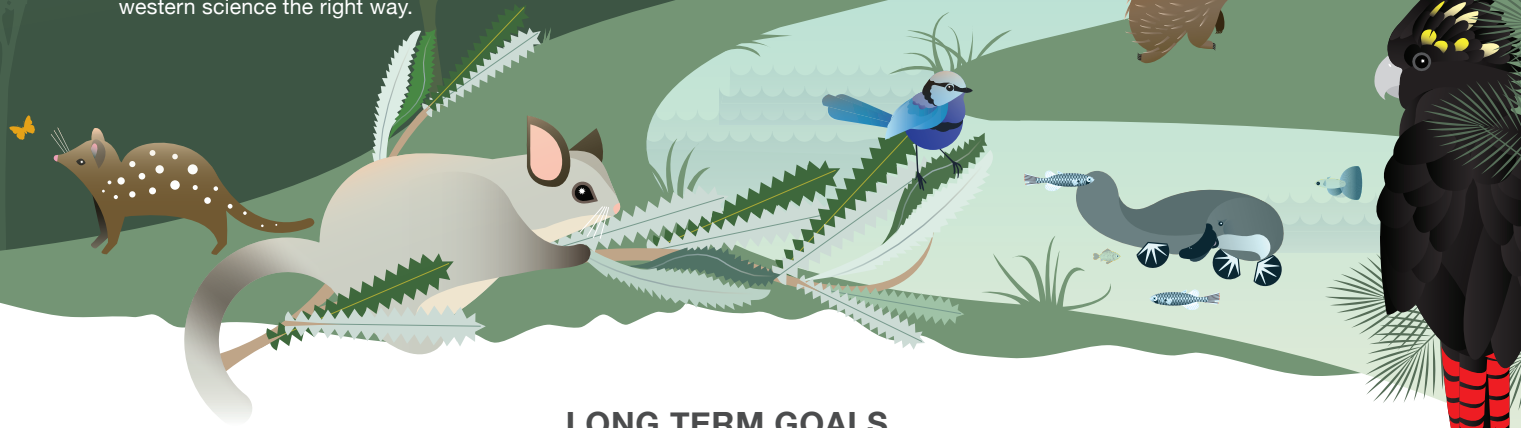

FOSTERING COLLABORATIVE PARTNERSHIPS:

Cultivating and growing a diverse network of local, regional and global partners working towards a shared vision for nature and people.

PROMOTE, ADVOCATE AND INFLUENCE:

Raise the profile of connectivity conservation by broadly promoting the need and benefits, and advocating with government to influence key policy and legislation.

LONG TERM GOALS

The Great Eastern Ranges initiative comprises a robust network of partners whose collective impacts match the scale of the planetary challenges we face.

We have supported the establishment of new connectivity initiatives in other priority regions across Australia.

Important landscapes and natural systems across the Great Eastern Ranges are better protected and connected.

Our projects are delivering long-term, sustainable impacts across multiple landscapes in a rapidly changing climate.

We have secured the funding, resources and capacity needed to serve as a flourishing and effective backbone organisation for connectivity conservation.
